Pancreatic Cancer - The Deadly Statistics

Pancreatic Cancer has the #1 fatality rate of all cancers.

Pancreatic Cancer is the 4th cancer killer in the United States amongst both men and women.

There are no early warning signs or detection methods.

Government funding is limited, therefore private fund raising and donations are essential to the ongoing research for the early detection, treatment and cure of pancreatic cancer.

Approximately 37,170 people will be diagnosed with pancreatic cancer this year in the United States and approximately 33,370 will die this year.

Together we can make a difference!
